

HashiCorp

Remote-first cross-functional leadership to drive EPD-led execution and growth.

Team Types

Terminology from
Team Topologies

Stream Aligned

Aligned to a single, valuable stream of work or persona.

Complex Subsystem

Responsible for building and maintaining a part of the system that depends heavily on specialist knowledge.

Platform

Owning foundational services and infrastructure,

Top Ways to Move the Needle on TFC (Strategic Priorities x Customer Personas/Workstreams)

Provider / Customer Personas	Practitioner	Startup	Enterprise	Pipeline/Workstream
Core Workflows	CLI onboarding for GCPs Example flow CLI onboarding for GCPs: Import flow	Variable sets State-based collaboration	Workspaces: ports and location at scale GCPs for infrastructure over time Availability	GitLab integration
Self Service	Onboard using a module from public registry	Workspaces templates	Onboard using a module from private registry	Run trigger visualization
Ecosystem (providers + add-ons)	Onboard by ingesting provider state	Onboard by ingesting provider state	Pre-and post-evaluation integrations Analytics and visualization integrations	3rd party pipeline integrations

IMPACT

Remote-first leadership. Design-led growth.

HashiCorp is the leading multi-cloud infrastructure company (#4 on Forbes’ Cloud 100 in 2020), and a remote-first company since its inception.

I joined HashiCorp in January 2020 to **lead and grow a remote first, globally distributed design team** (US, Canada, UK, Germany) working on Terraform, the industry leading cloud infrastructure orchestration platform.

While the details of my current work at HashiCorp are confidential, I have published case studies about some of the challenges I’ve worked through and my impact on the organization through the Plato mentoring platform.

Introducing Design in the Roadmap Creation Process

How to Level Up Your Design Team

Even High Performers Need Direction and Support
